

## Adjudicating Groundwater: A Judge's Guide to Understanding Groundwater and Modeling

July 2018

*Adjudicating Groundwater: A Judge's Guide to Understanding Groundwater and Modeling* is a scientific bench book primarily created for judges involved in some of the nation's most complex natural resources litigation related to groundwater. The bench book explains both the fundamentals of groundwater science and groundwater modeling and combines the expertise and experience of academic scientists, federal scientists, and judicial officers, making it the most reliable publication for judges involved in groundwater cases.

For more information about the bench book and its authors, editors, and funders, please visit the [National Judicial College's website](#).

Downey Brand is a proud contributor to the development of the bench book and has been granted rights to provide a copy to non-judicial individuals. If you are interested in obtaining a copy of the bench book, please contact Merry Iseley.
